

GASOLINE VAPOR RECOVERY EQUIPMENT DEFECTS LIST

State law has long identified specific defects in balance nozzles as mandatory tag out items for district inspectors. Catastrophic defects in newer bootless systems have been identified in the respective executive orders. Recent changes in state law outlines all taggable defects in a single list that may be updated by ARB without further action by the legislature. This three hour seminar presents the changes to Title 17 and the updated Vapor Recovery Equipment Defects list.

**April 20, 2004
9:00 AM - noon
Ventura County APCD
669 County Square Dr.
Ventura, CA**
